

The Meteo-France 48t1 e-suite - Summary of content and performance *(a complement to the « Meteo-France NWP systems » poster)*

Matthieu Plu, Météo-France/CNRM/GMAP

Tallin (remotely from Toulouse), 30th March 2023

1. Context – The present « 46t1 » o-suite

2. 48t1 AROME

3. 48t1 ARPEGE

4. Future plans

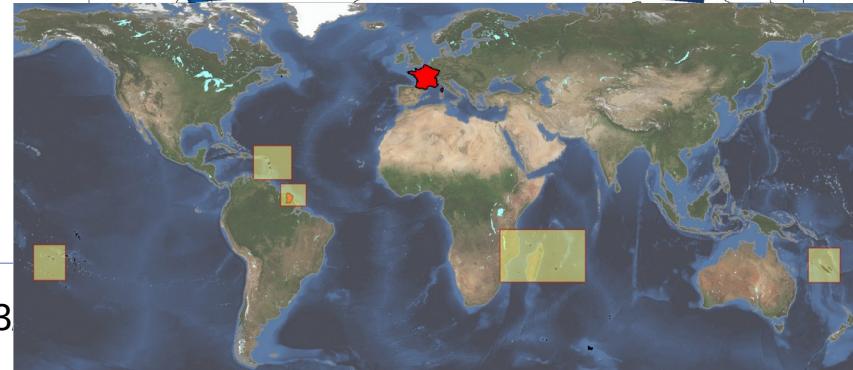

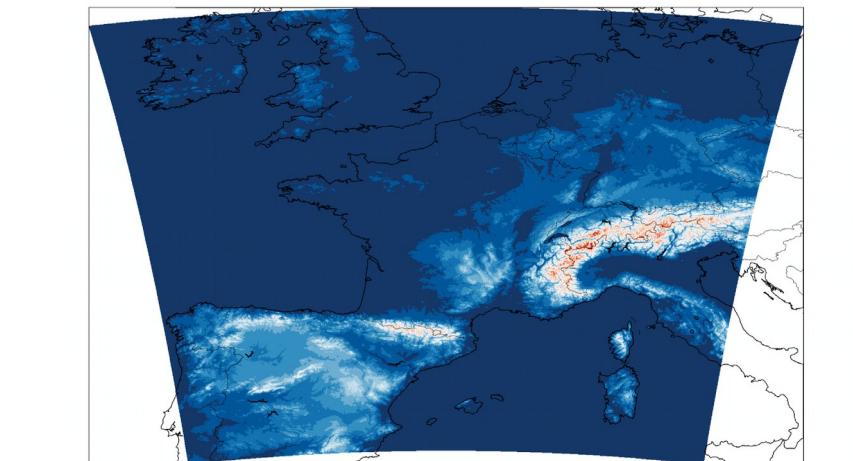

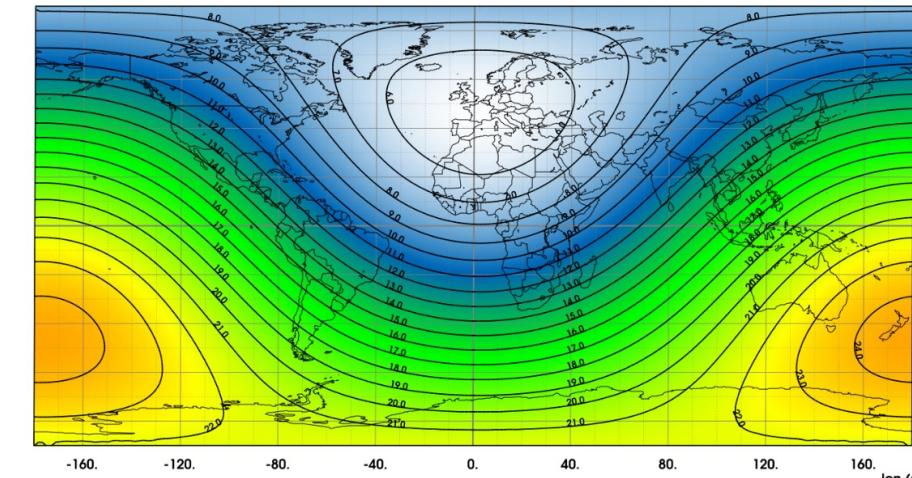

1. Context – The present 46t1 o-suite

1. Context – The present 46t1 o-suite

46t1 suite has been declared operational on 29 June 2022 :

- new ARPEGE physics (including Tiedtke-Bechtold convection scheme),
- improvements in AROME representation of convection (removal of semi-lagrangian diffusion),
- increase of resolution of ARPEGE-EPS to reach ARPEGE resolution (T1798c2.1L105),
- increase of resolution of AROME-EPS to reach AROME resolution (1.3kmL90),
- increase of resolution of AROME-overseas (and use of 32b computations),
- among many other innovations (observations for assimilation, physics, perturbations, etc)

... see ACCORD Newsletter #2

1. Context – The present 46t1 o-suite

ARPEGE :

Assimilation 4D-VAR, T1798c2.1L105

ARPEGE-EDA, 50 members, T499C1L105

Forecast 34+1 members, +102h 4times/day

AROME-France :

Assimilation 3D-VAR, 1.3kmL90

AROME-EDA, 25 members, 3,25kmL90

Forecast 16+1 members +51h, 4times/day

(+ deterministic runs every 3hours +
AROME-IFS + AROME-NWC)

AROME-overseas :

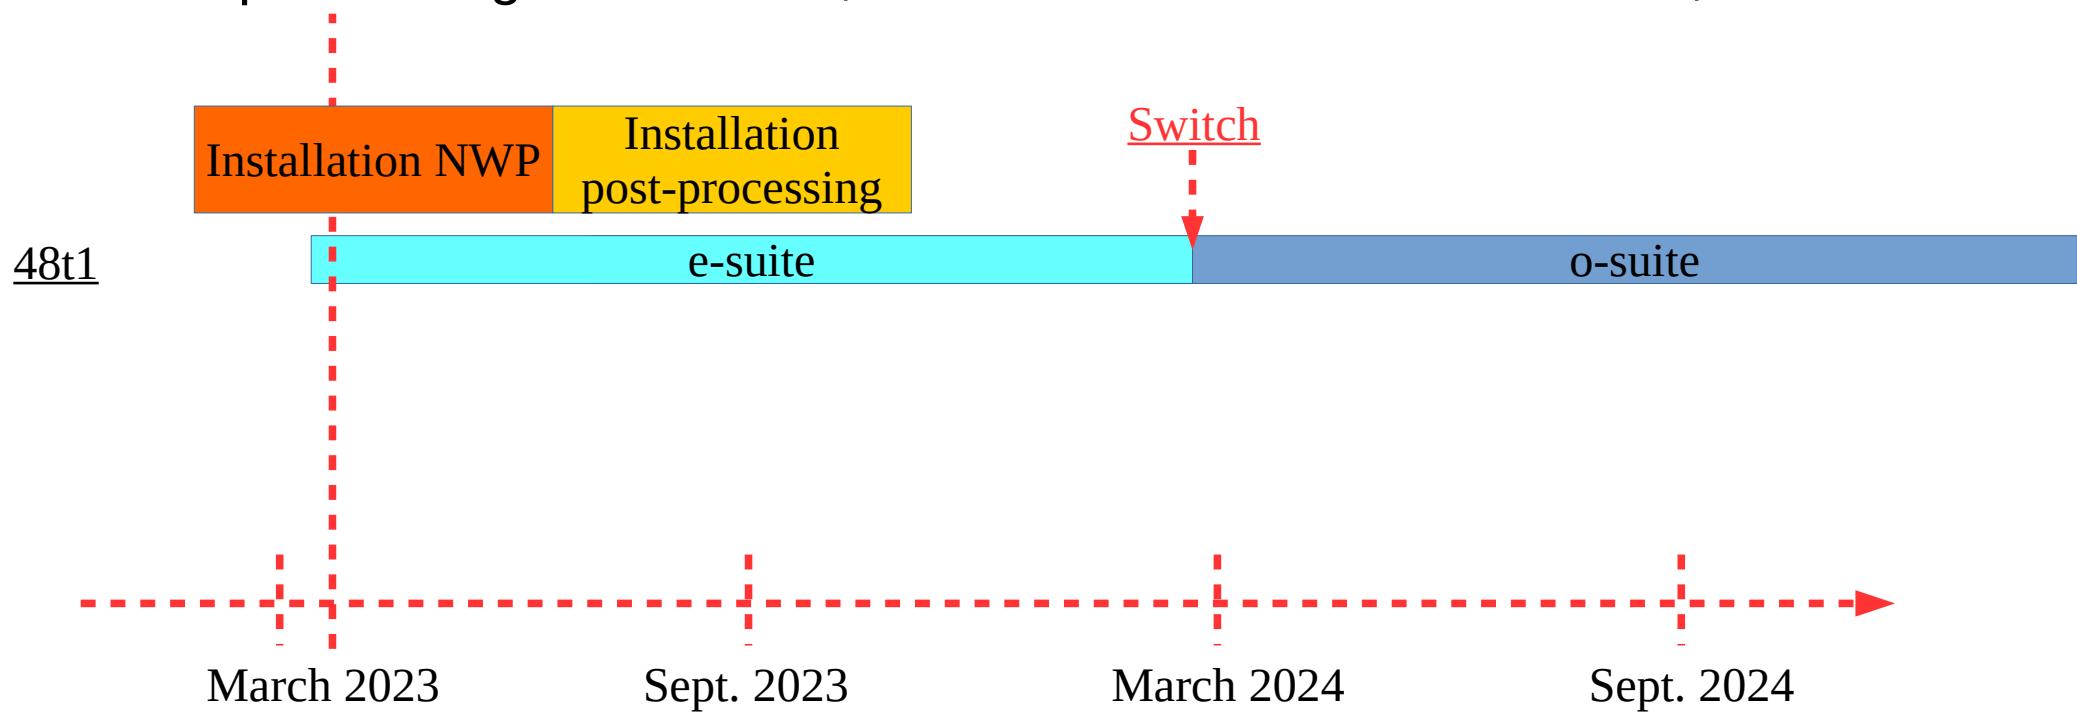

1.3kmL90, IFS coupling, 5 domains

Forecast +48h (+extension for cyclones),
4times/day

1. Context – Schedule of 48t1 suite

Most components are included in the e-suite : AROME-F, AROME-EPS, ARPEGE, ARPEGE-EPS, AROME-NWC, AROME-overseas... but not all initial times for all systems,

Post-processing : calibration, automatic database « ALPHA », ...

2. 48t1 AROME

2. 48t1 AROME - Assimilation

- 3D Ensemble variational scheme « 3DEnVar », replacing 3DVAR, (*presented by V. Vogt, « Implementation of 3DEnVar with OOPS »*),
- Use of Incremental Analysis Update,
- Implementation of assimilation schemes (3DEnVar, AROME-EDA 3DVAR, AROME-NWC) under OOPS,
- AROME-EDA (used for 3DEnVar): 50 members, longer forecast term,
- Direct assimilation of microwave radiances in « all-sky » conditions (replacing assimilation of humidity after Bayesian inversion),
- Use of WIGOS reference for surface radiosonde observations,
- Assimilation of GNSS-RO data from SPIRE, GRACE-C, Sentinel-6,
- Assimilation of wind and temperature data derived from Mode-S (+900.000 wind, +500.000 temp. observations per day!) - data acquired from EMADDC,
- Assimilation of wind scatterometer HY-2B and HY-2C,
- AROME-NWC : assimilation of MeteoSat/RapidScan radiances.

2. 48t1 AROME – Surface and physics

- Surfex v8.1,
- SST from Mercator (PSY4 1/12° product, now moving to GLO12),
- Radiation : EcRad with McIca solver,
- Include the effect of solar eclipses on radiation,
- Some improvements in the turbulence scheme.

2. 48t1 AROME – Forecasts

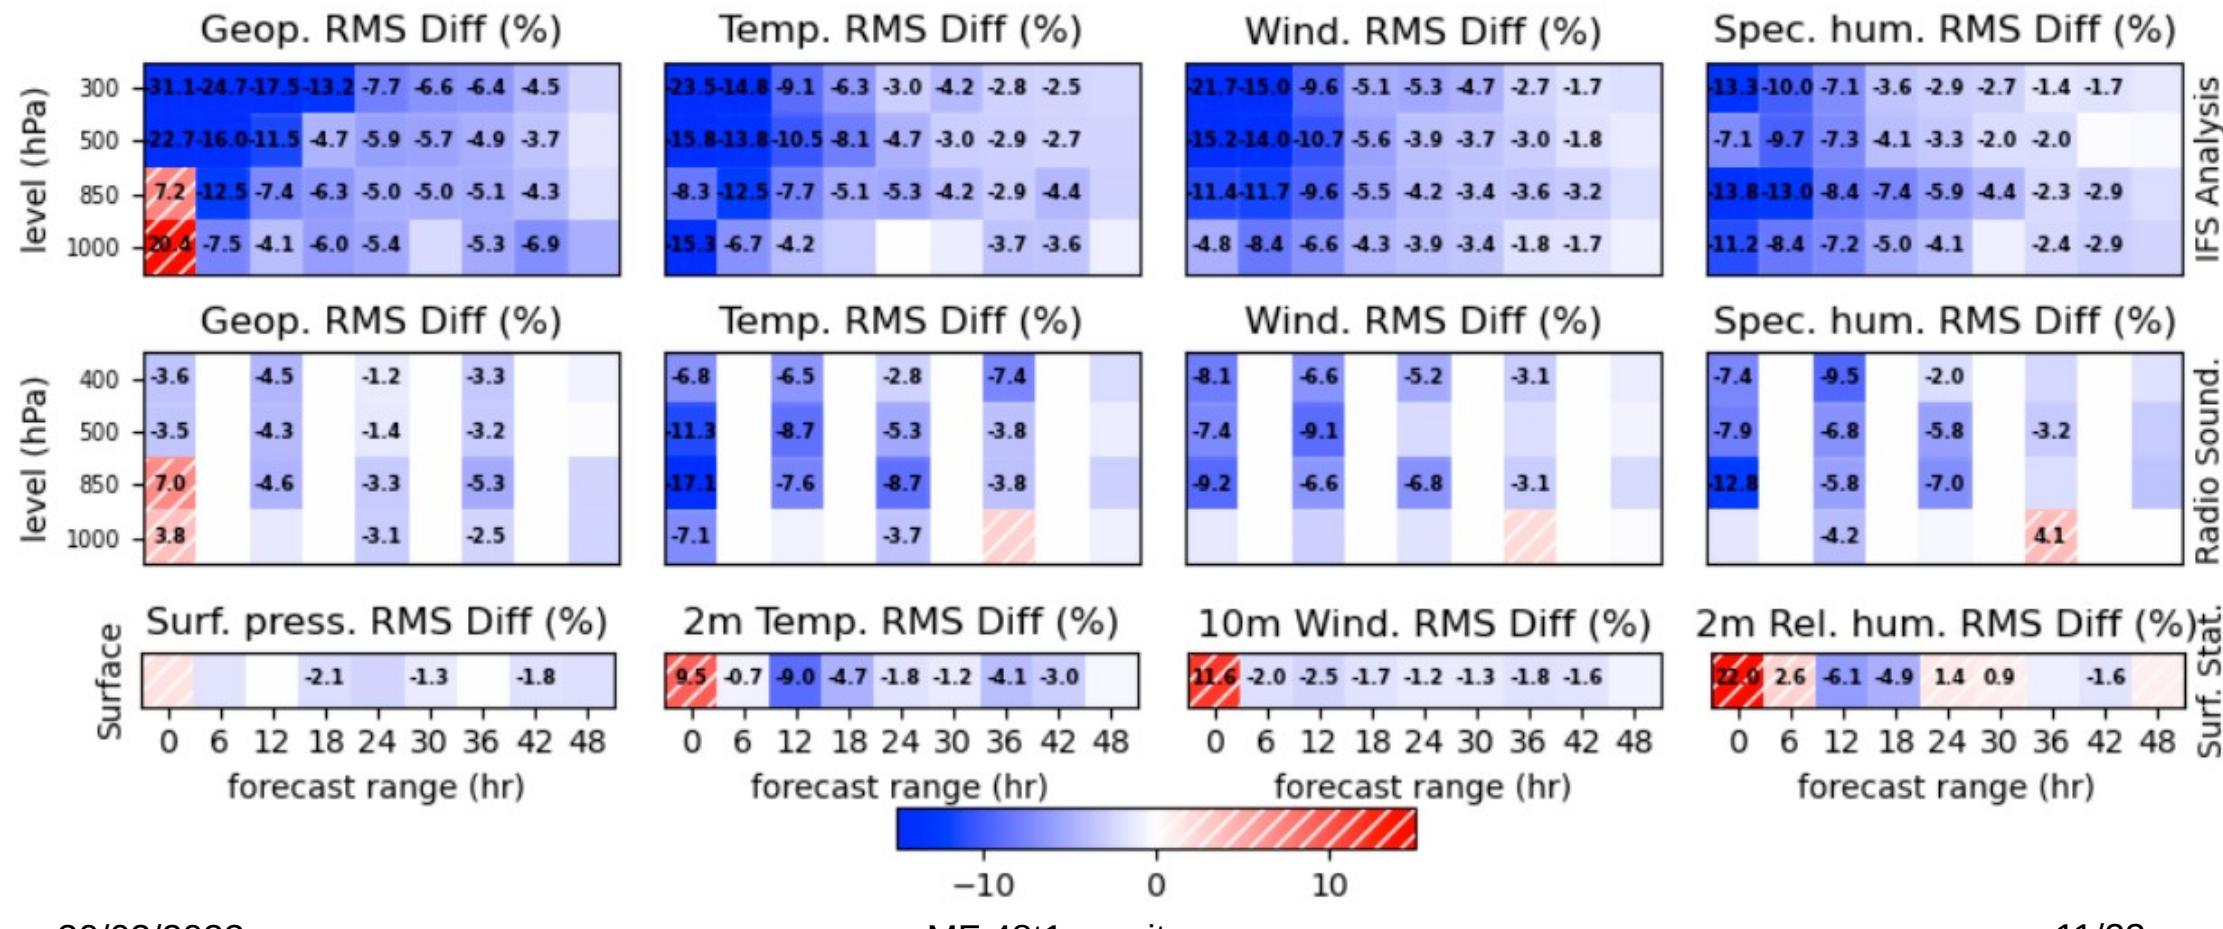

- All « production » forecasts in single precision,
- EPS : 24+1 members instead of 16+1 members,
- New user-oriented diagnostics delivered.

AROME-overseas :

- AROME-overseas system follow evolutions of AROME physics and surface (Mercator SST already included),
- AROME-EPS overseas systems have been recently installed (*presented by O. Nuissier*), a 48t1 version is included in the e-suite,

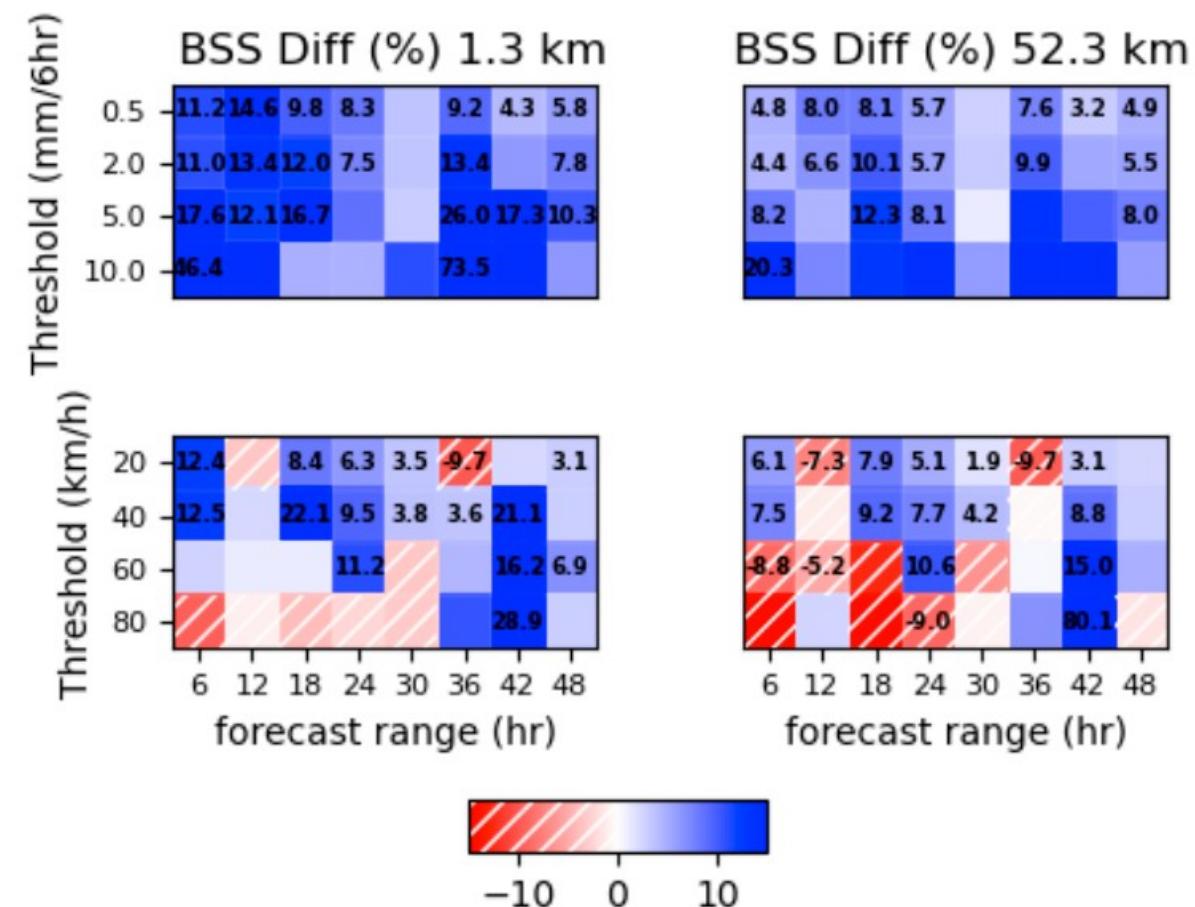

2. 48t1 AROME – Performance AROME-France

- % RMS diff, 48t1 experiment against 46t1 o-suite, 31/07/2022 → 01/10/2022,
- Verification to IFS analyses, radiosondes, surface measurements

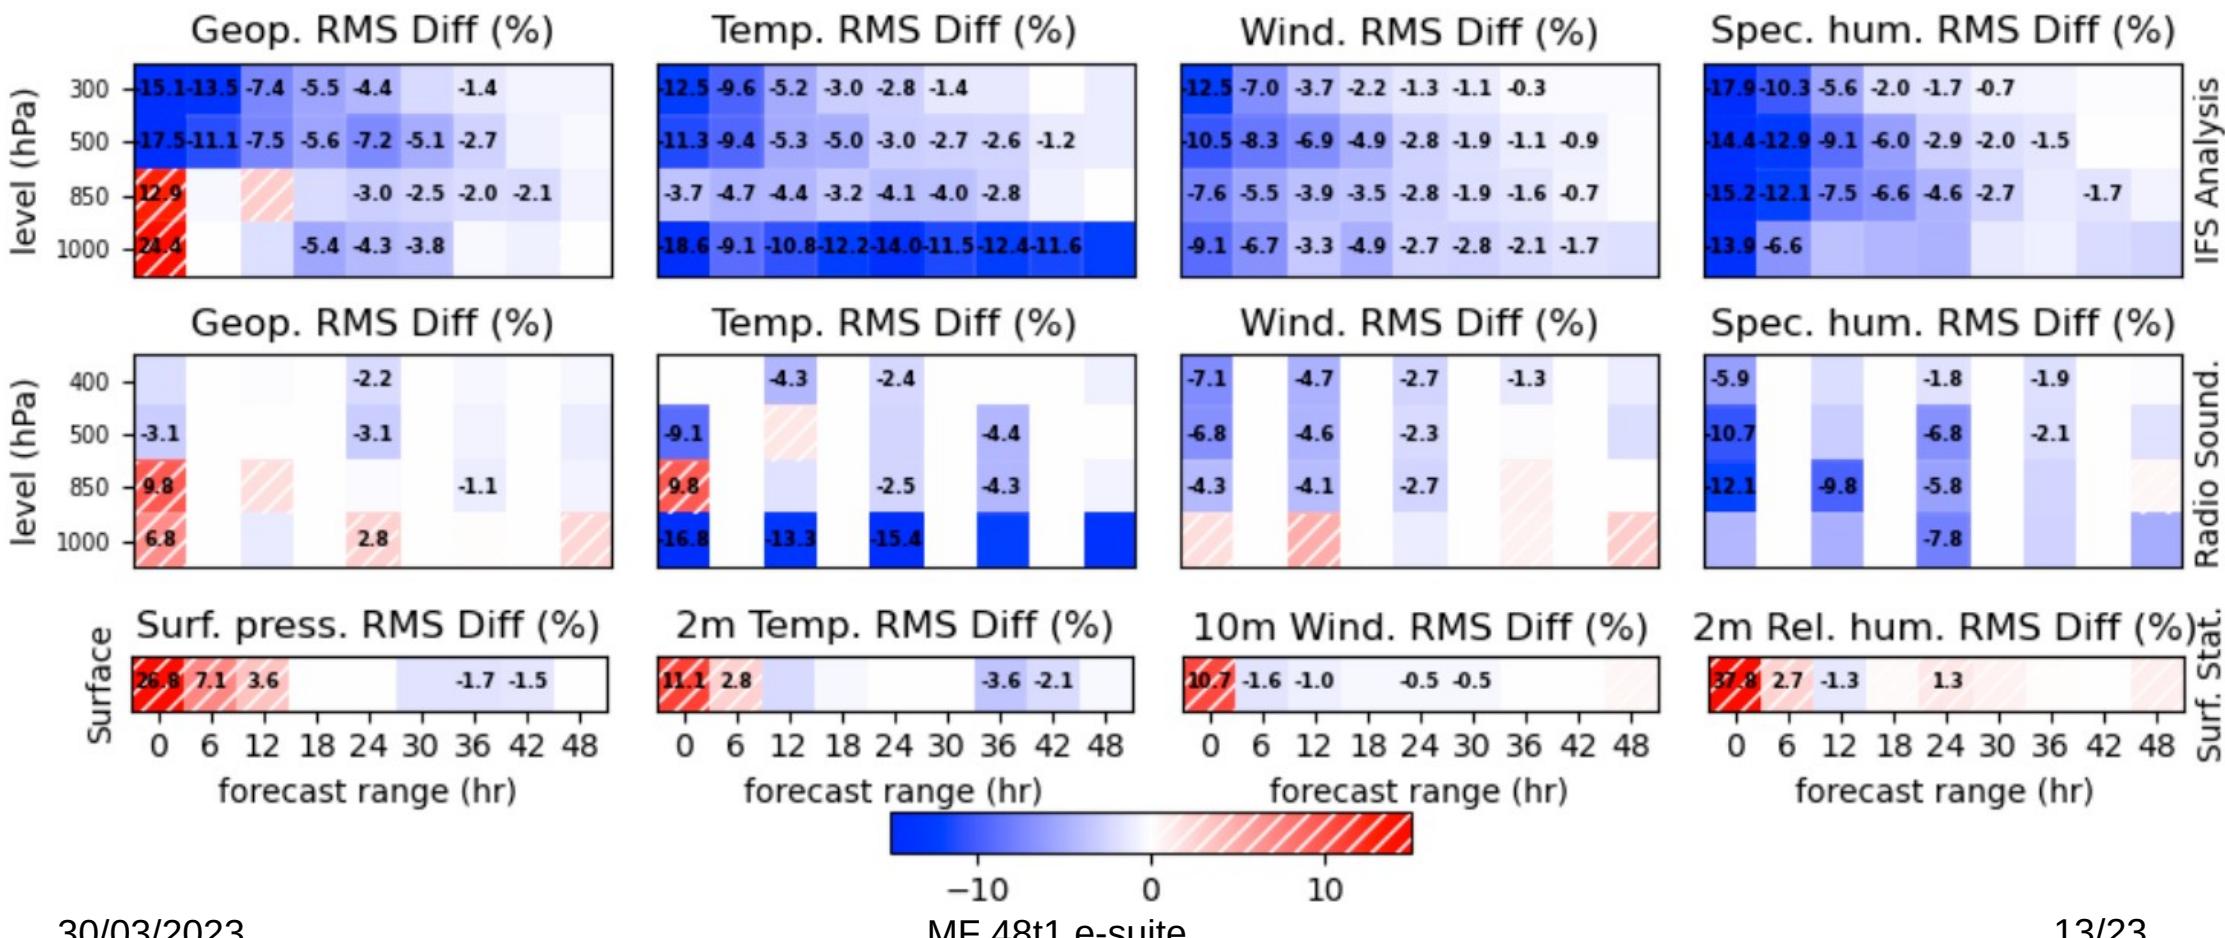

2. 48t1 AROME – Performance AROME-France

- Brier Skill Score,
- 48t1 experiment against 46t1 o-suite,
- 31/07/2022 → 01/10/2022,
- Verification surface measurements (rain accumulation and wind gusts),

2. 48t1 AROME – Performance AROME-France

- % RMS diff, 48t1 experiment against 46t1 o-suite, 01/12/2022 → 31/10/2022,
- Verification to IFS analyses, radiosondes, surface measurements

2. 48t1 AROME – Performance AROME-France

- Large improvements for all variables and at all levels,
- Very short terms : some degradation (the analyses are less close to the observations compared to 3D-Var, see V. Vogt's presentation),
- Larger improvements in summer than in winter,
- Many tests done on storm, fog, high precipitation events ... overall positive.

2. 48t1 AROME – Performance AROME-EPS

... integration experiments and scores on-going ...

3. 48t1 ARPEGE

2. 48t1 ARPEGE - Assimilation

- Implementation of assimilation schemes (ARPEGE, ARPEGE-EDA) under OOPS,
- Hybrid 4DVAR : 3D anisotropic covariances from ARPEGE-EDA,
- ARPEGE-EDA : addition of a control unperturbed member,
- Direct assimilation of microwave radiances in « all-sky » conditions (replacing assimilation of humidity after Bayesian inversion),
- Use of WIGOS reference for surface radiosonde observations,
- Assimilation of GNSS-RO data from SPIRE, GRACE-C, Sentinel-6,
- Variational debiasing of aircraft data,
- update of the IASI inter-channel cross-correlations errors,
- use of model (GELATO) sea-ice for assimilation of microwave radiances.

2. 48t1 ARPEGE – Physics and surface

- Update of the « Tiedtke Bechtold » deep convection scheme, some improvements (rainfall near the coastlines),
- WENO interpolations in the stratosphere (T and q),
- Radiation : EcRad with Mclca solver,
- Include the effect of solar eclipses on radiation,
- Surfex v8.1,
- SST from Mercator (PSY4 1/12° product, now moving to GLO12).

Specific to ARPEGE-EPS :

- Removal of some singular vectors (over NH and SH domains),
- Adaptation of perturbation parameter ranges.

2. 48t1 ARPEGE – Performance ARPEGE

Score cards

- 48t1 experiment against 46t1 o-suite
- 05/08/2022 → 15/01/2023,
- domain Europe,
- Verification against radiosondes and IFS analyses :

	Réf.	Radiosondes	IFS analyses

2. 48t1 ARPEGE – Performance ARPEGE

% gain in RMSE:

- 48t1 experiment against 46t1 o-suite
- 05/08/2022 → 06/02/2023,
- domain Europe,
- Verification IFS analyses

In general, positive significant improvements.

Except for temperature in the low levels (neutral or slight degradation), and humidity at short terms

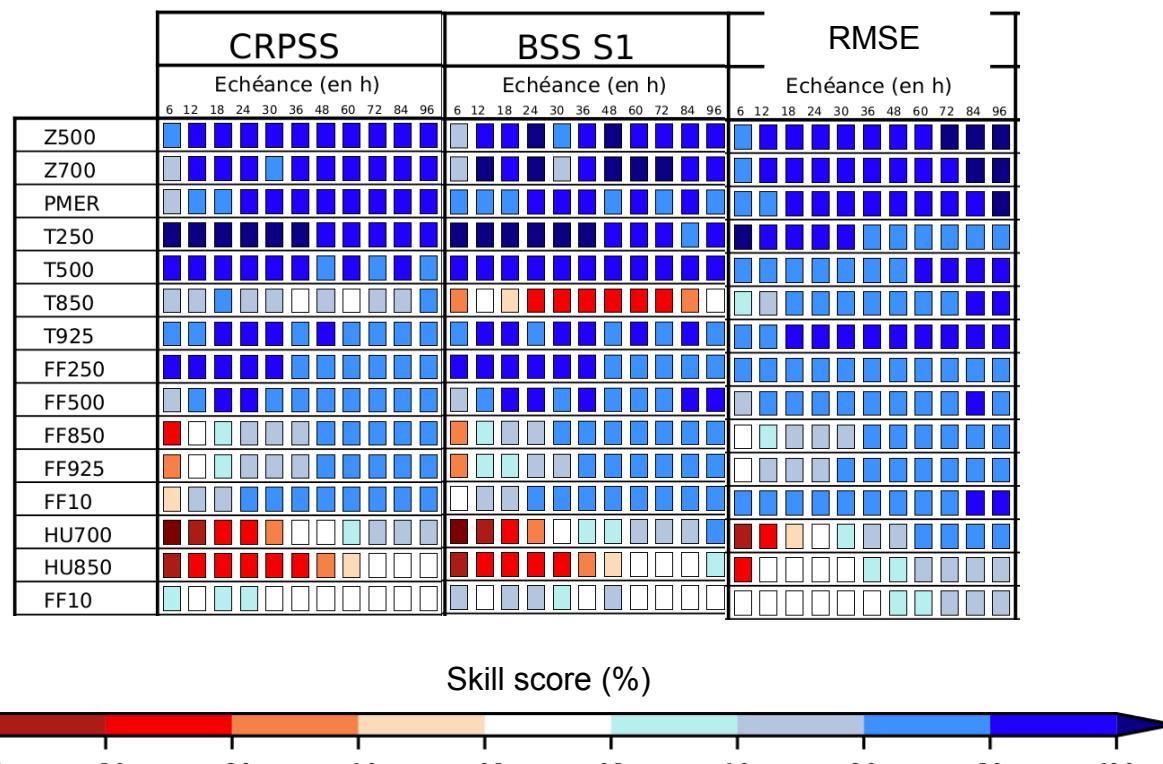

2. 48t1 ARPEGE – Performance ARPEGE-EPS

Skill score (in%)

- 48t1 experiment against 46t1 o-suite
- 04/08/2022 → 31/12/2022,
- domain Europe,
- Verification ARPEGE analyses & surface stations

In general, positive significant improvements.

Except for temperature and humidity in the low levels (consistent with deterministic scores).

4. Future plans

4. Future plans (on-going work for next e-suite or later)

- AROME 4DEnVar,
- Include hydrometeors in the AROME control variable (in order to enable direct assimilation of radar reflectivity, assimilation of MTG-I/LI),
- Improve ARPEGE 4DVAR (improve tangent-linear, revise minimization loops and resolutions, towards hybrid 4DVAR/ensemble, ...),
- Evolutions of model perturbations (parameter perturbations, SPP),
- Prepare for the assimilation of future satellites : MTG-S/IRS, Metop-SG,
- Assimilation of Mode-S in ARPEGE,
- Generalize use of single precision in forecasts,
- Surface analysis under OOPS (*presented by S. Marimbordes*),
- Include Ocean mixed layer coupling in ARPEGE and AROME-F,
- Include more complex coupling in some systems (see *AROBASE presentation*),
- ...
