# SODA and surface data assimilation in HARMONIE

Trygve Aspelien  
(on behalf of many....)

ASM Bucharest 7-10.04.2014

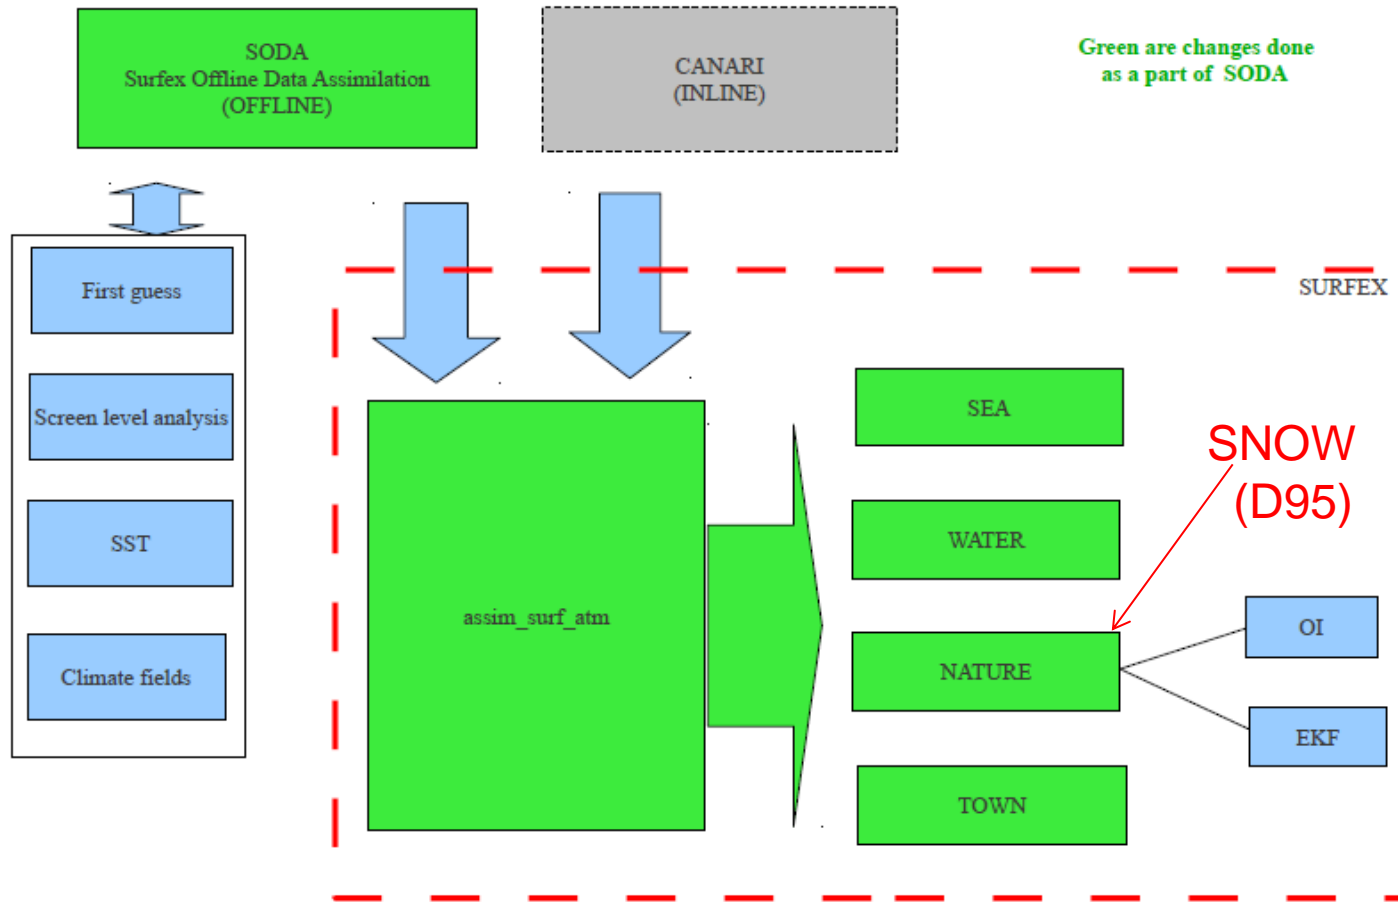

# Status update & information

- SODA history:
  - Workshop on SURFEX data assimilation 5-6 March 2012
  - Not champagne... (SODA=Surfex Offline Data Assimilation)
  - Merged OI\_main and EKF routines into one interface summer 2012
  - => Entered cy37h1.2
  - Parallell development regarding I/O treatment and inline OI\_main
  - Coordination meeting 28.05.13
    - Agreed on merging development
    - SODA was partly re-written summer 2013 (separated I/O handling from the assimilation)
    - Possible to call SODA directly from CANARI
  - => Entered cy38h1.1. Will be a part of SURFEX 8

# SODA runs on all tiles

# Flowchart

# Future of SODA

- New development
  - Assimilate LAI (merge an EKF\_main spin-off with SODA)
  - Assimilate lake properties
  - Snow assimilation in more complex snow schemes
  - Sea ice scheme + assimilation
  
- Discussion on MG level (January 2014)
  - External coupler?
  - Integrated in hybrid upper air and surface data assimilation?
  - Existing methods (at least some) can hopefully still be used whatever the future brings...

# Default setup of cy38h1.1 (surface assimilation)

- Initialization:
  - Extrapolation of TG1, TG2, WG1, WG2, WGI1, WGI2 and SNOW in points where atmospheric LSM and SURFEX has a mismatch.
    - ECMWF (H-TESEL) => gl => FullPos (ISBA 2-L) => SURFEX (ISBA 3-L)
  
- CANARI + SODA inline
  - CANARI:
    - Assimilating T2M, RH2M, SNOW (depth) from SYNOP stations
  - SODA:
    - Sea:
      - SST interpolated from ECMWF boundary files + extrapolated (e.g. long fjords)
    - Lakes:
      - LST updated from LAND values of TG2 and extrapolated
      - Height adjustment of LST
    - Nature:
      - Snow analysed at 06 UTC
      - OI\_main (EKF experimental)
    - TEB:
      - T\_ROAD3 updated from T2M increments

# Obsmon

- As a part of MetCoOp a monitoring system was developed
  - ODB statistics calculated and stored in SQLite database
    - <https://svn.hirlam.org/branches/obsmon>
  - R+shiny+RQSLite plot the data on-the-fly
    - <https://svn.hirlam.org/trunk/contrib/obsmon>
  - In use at [hirlam.org:3838/obsmon](http://hirlam.org:3838/obsmon)
- Still under development
