

Sensitivity of the QPF with physics and ... dynamics

E. Bazile

and

Y. Seity, G. Hello, S. Malardel

With special thanks to Filip, Jean-Francois and Radmila

or

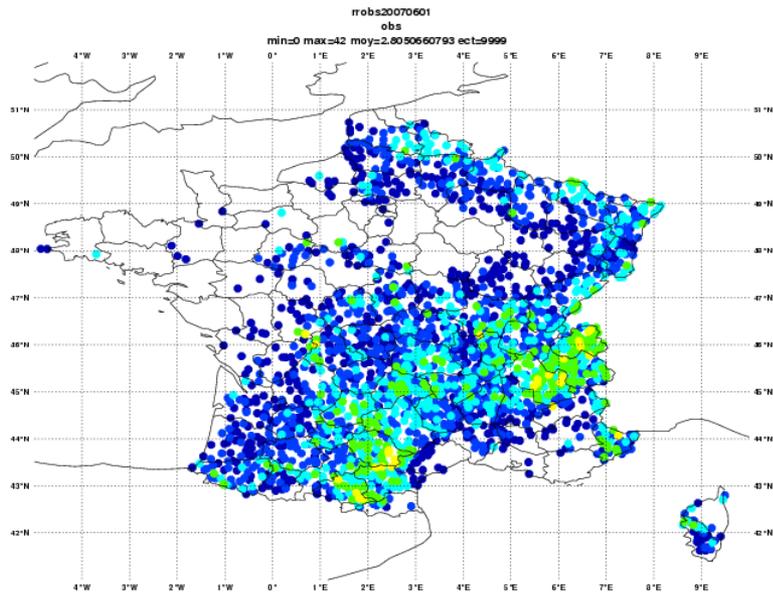

Do we underestimate the RR ?
Do we need a deep or "something
else " at 2.5km ?

- A deep convection scheme ?
- A shallow = KFB, EDKF, EDMF etc ...
- Some thing in between:

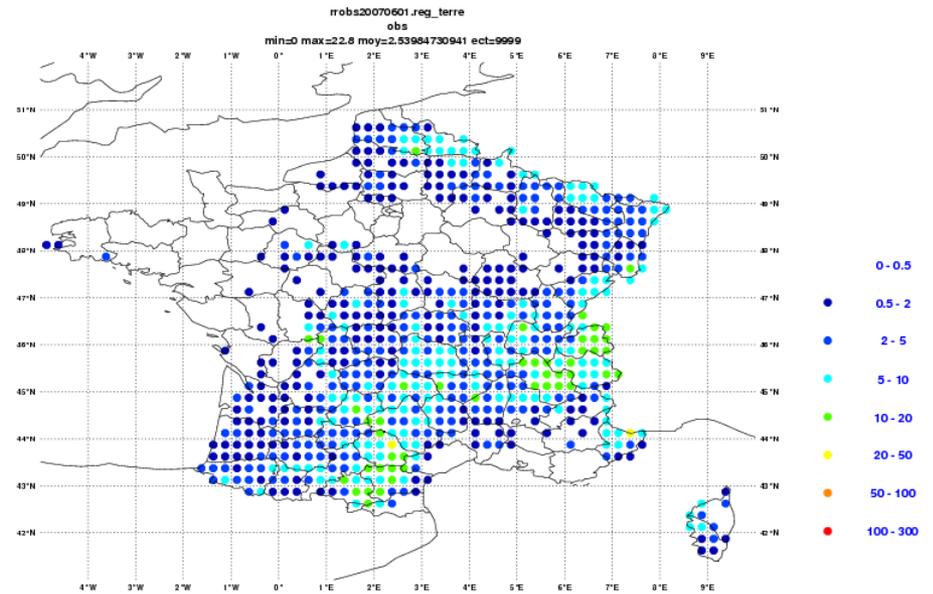

- A "medium" (also clairvoyant !) scheme

Context

- Period June and November 2007 over France. 24H cumulated rain. 4080 observations → regular grid 0.25°

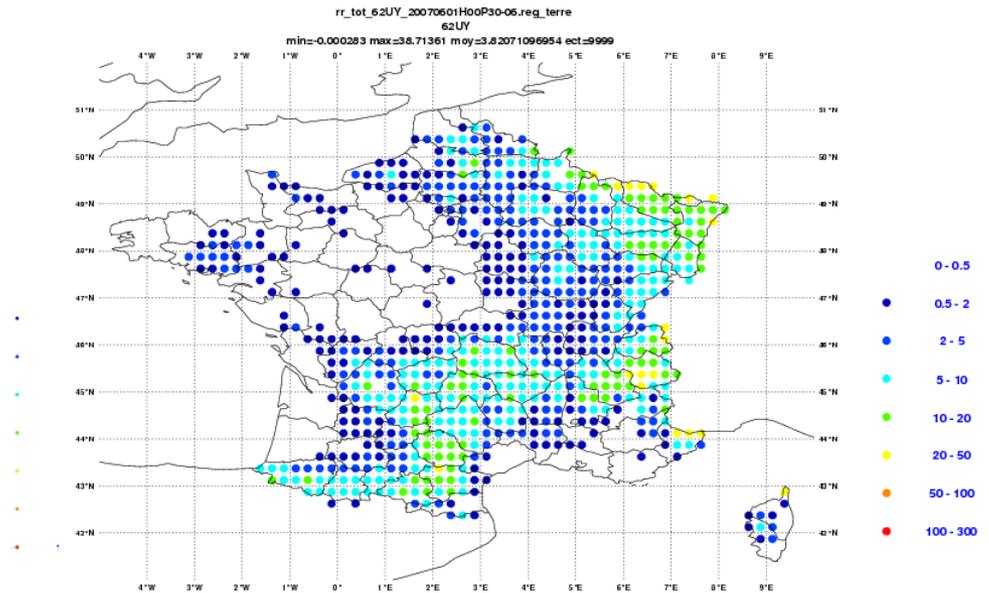

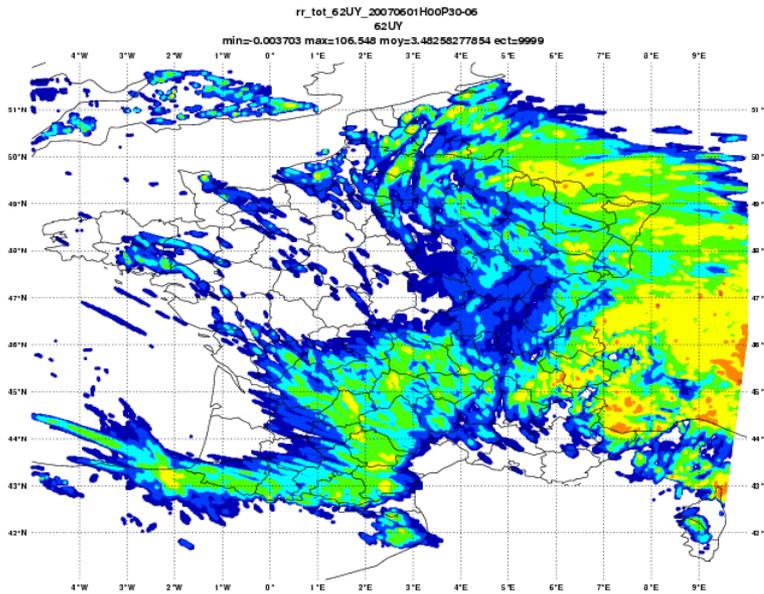

Max=42mm

Max=22.8mm

Context

- Model 2.5km, NH, time step=60s, same LBC, same initial fields, same domain etc .. → regular grid 0.25° only on the observation point.

Some physics options in the HAAA Galaxy ...

Models

- **AROME= 6 versions :**
 - first prototype with KFB and no SLHD = 62SR
 - with SLHD only on Ql, Qi, Qr, Qs, Qg = 62UB
 - with SLHD and EDKF = 62UY
 - with EDKF (no SLHD) = 63AB
 - with SLHD and EDKF only on Ql, Qi = 63BA
 - with SLHD (Pr_tunings) and EDKF on T, W, SVD, Qv, Ql, Qi = 63BL
- **ALADIN= 5 versions :**
 - Oper. physics no SLHD = 73WT
 - Oper. physics with SLHD (Prague tunings) on T, W, SVD, Qv, Ql, Qi = 747D
 - Test physics (Anodin) no SLHD = 73WK
 - Test physics (Anodin) + SLHD only on Ql, Qi, Qr, Qs = 73X4
 - Test physics (Anodin) + SLHD (Prague tunings) on T, W, SVD, Qv, Ql, Qi = 746S
- **ALARO-0 physics = 5 versions**
 - without 3MT and no SLHD = 73WY
 - without 3MT and SLHD (Prague tunings) on T, W, SVD, Qv, Ql, Qi = 741N
 - with 3MT and no SLHD = 73XH
 - with 3MT and SLHD (Prague tunings) on T, W, SVD, Qv, Ql, Qi = 741P
 - with 3MT and full namelist from Prague (SLHD, PC) = 741X

Frequency bias and HSS RR 24h (06TU-30TU) over France June and November 2007 ALADIN with MF physics

FREQUENCY BIAS

2007JuinNov

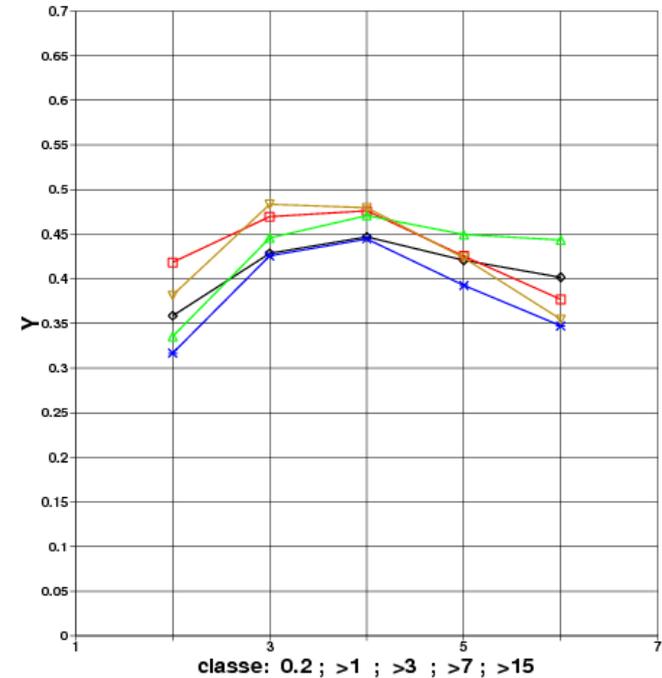

- ANODIN_SLHD_Pr(746S)
- ANODIN_SLHD_Qc(73X4)
- ANODIN(73WK)
- ALADIN+SLHD(747H)
- ALADIN(73WT)

Impact of the SLHD almost bigger than the boundary layer parameterization !
(Louis versus TKE+KFB)

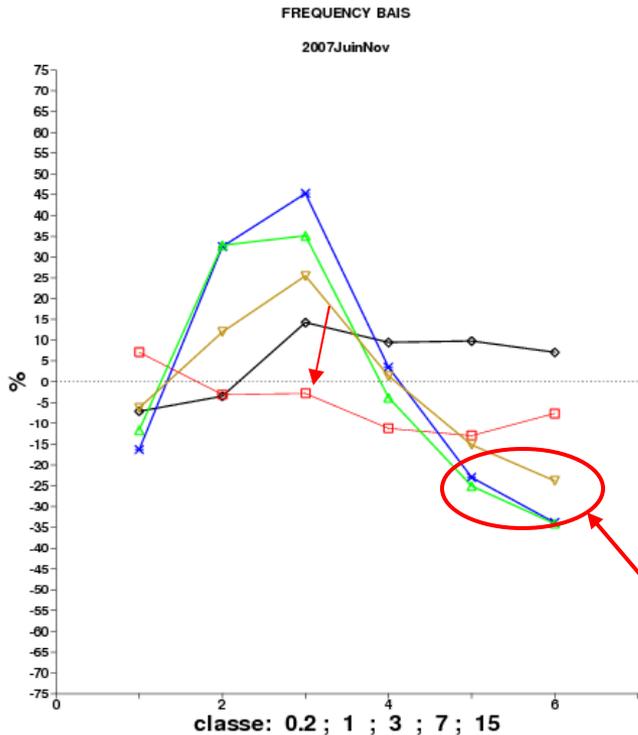

Heidke Skill Score (persistence)

2007JuinNov

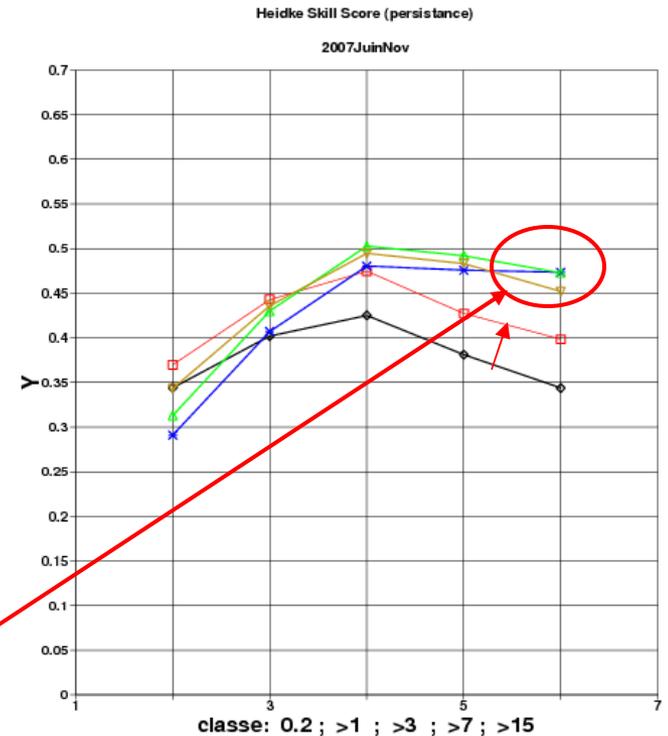

No underestimation of the rainfall in terms of the model climatology, except for RR>15mm. SLHD (Pr options) improves the FB and HSS

Frequency bias and HSS RR 24h (06TU-30TU) over France June and November 2007 ALARO-0 physics

- ALARO0+3MT_Prague(74)
- ALARO0+3MT+SLHD(74)
- ALARO0+3MT(73XH)
- ALARO0-3MT+SLHD(74)
- ALARO0-3MT(73WY)

Without 3MT and SLHD → underestimation of the rainfall but improves the HSS

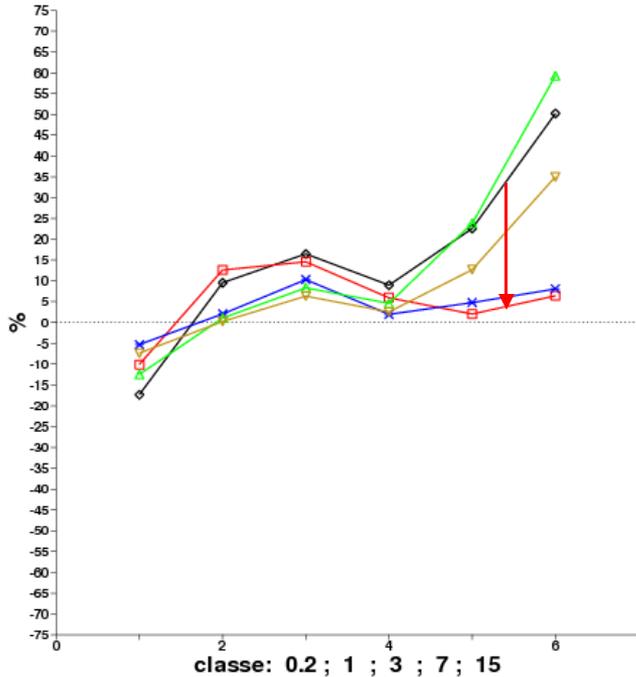

With 3MT = improvement of the HSS but there is a clear underestimation of the frequency of the RR > 7mm

Frequency bias and HSS RR 24h (06TU-30TU) over France June and November 2007 AROME physics

- ◇ OLD_AROME

SLHD on all the hydrometeor reduces RR > 7mm

EDKF Without 3MT and SLHD → underestimation of the rainfall but improves the HSS

Heidke Skill Score (persistence)

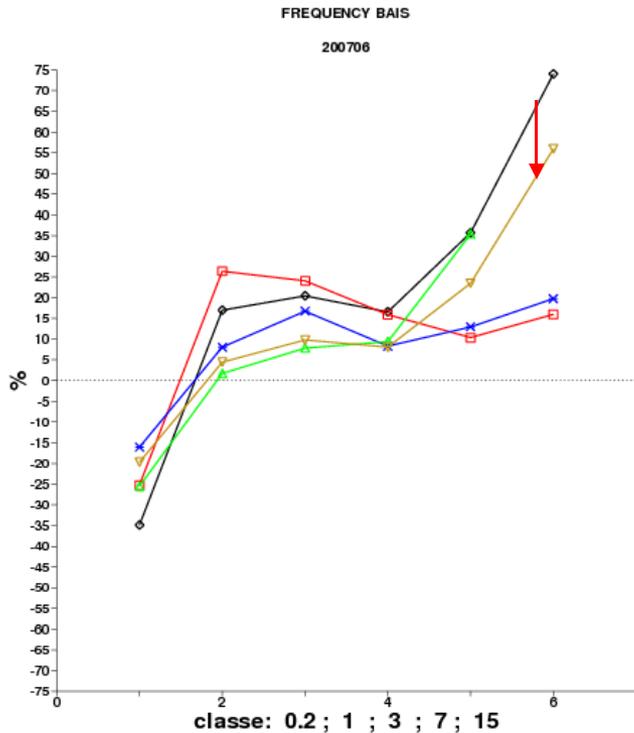

2007JuinNov

EDKF improves the small RR < 3mm

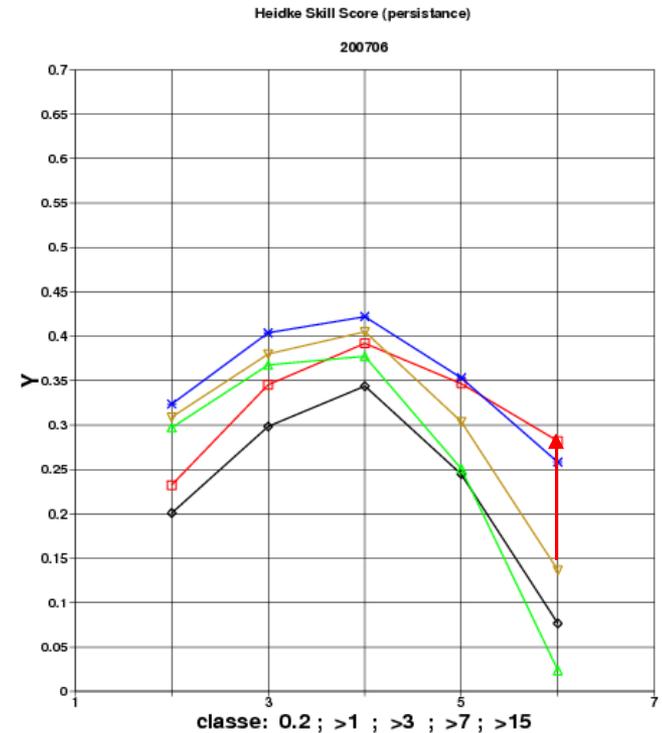

Big and positive impact of the SLHD on Qr, Qs, Qg ???!!!

- ×— SLHD_Qc_Qp_EDKF
- SLHD_Qc_Qp
- ◇— OLD_AROME

SLHD on Q_i, Q_l, \rightarrow
small impact

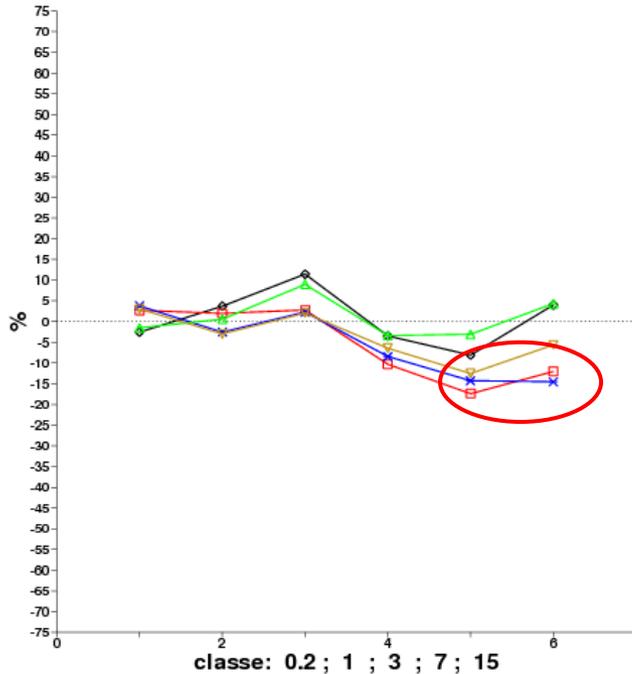

In fact, it is "only" the SLHD on the Q_r, Q_s, Q_g which reduces the intense rainfall !

Frequency bias and HSS RR 24h (06TU-30TU) over France November 2007

CONCLUSIONS

If your model overestimates the intense rainfall → please try SLHD !

If your model underestimates the rainfall → please tune your SLHD and ...

at the end if you don't solve the problem, may be try to play with the physics parametrization !

It is logical with increasing the resolution, we increase the resolved part vs the parametrized one !

CONCLUSIONS

So for me now,
is it necessary to work and develop new parameterization for
micro-physics, shallow convection, computes sophisticated
mass flux, trigger function, etc ...?

if after we don't understand what we are doing with SLHD and
its interaction with the physics ?!

Can we apply SLHD on hydrometeor without SLHD on T and
W ?

Physics generate noise for dynamics (Aidan Mac Donald)
and SLHD remove the physics impact so

please help a poor man working on physical parameterization !

CONCLUSIONS

In fact in HAAA galaxy we have an
EPS system at 2.5 km based on
multi-physics and multi-dynamics !
