Summary 1

- In average, ALADIN slightly underestimate the wind speed in the inland stations of north and center of Portugal.
- In average, ALADIN overestimate the wind speed in the west coast of Portugal.
- ALADIN underestimate the MSLP, mainly in anticyclonic situations.

Summary 2

- In average, in the inland stations of north and center of Portugal, ALADIN has a warm bias at 12UTC and 18UTC, whereas has a cold bias at 00UTC and 06UTC.
- In average, ALADIN has a warm bias in the west coast of Portugal, stronger in summer months.
- In average, in the inland stations of south of Portugal, ALADIN has a warm bias at 00UTC and 06UTC, whereas has a cold bias at 12UTC and 18UTC.
