-

Dear all,

It is well known, ".0" version are rarely bug-free ;-)
This upgrade is fixing of bug in the computation of new sql requests in incremental pack ; and it prepares cycle 47 with the addition of the SUBMODULE statement in Fortran keywords. All credits to Stéphane Martinez.

This new version has been installed on MF supercomputers "beaufix" and "prolix", on the PCs of GMAP and at ECMWF on CCA as a replacement of the version 6.7.0

The tar file can be found on ecfs and hendrix :
ec:/rme/hirald/gmckpack/gmckpack.6.7.1.tar.gz
hendrix:/home/khatib/gmckpack/gmckpack.6.7.1.tgz

Best regards,
Ryad
