

OSLO 2007 – ALADIN/HIRLAM WORKSHOP

PINUTS 3.0

(Jean-Daniel Gril)

PINUTS 3.0

- Why 3.0 ?

Alto is a new design with only one program which calls all pinuts tools according to the launch name (linking to alto). This modification aims to insert Pinuts in a new branch in the “util” part of the Aladin Model for cycle 32T2.

PINUTS 3.0

- Pinuts tools are :

Frodo, Pseudo, Edf, Ecto, Domolalo, Coneo,
and two new ones : *Makdo & Subdo*

- New docs on the GMAPDOC website :

edf, ecto (with explanation about the method on how to dispatch energy in the ellipses and the used formulae), *makdo, subdo* (with the link to doc of DOMAIN_MOD module).

AND NOW SOMETHING COMPLETELY DIFFERENT :

- A Documentation about the FA/LFI file structure will shortly be available on the ALADIN website

NOW, BACK TO OUR TOPIC

- Some samples of documentation.
