# Real-time forecast charts from different Hirlams: concept and examples

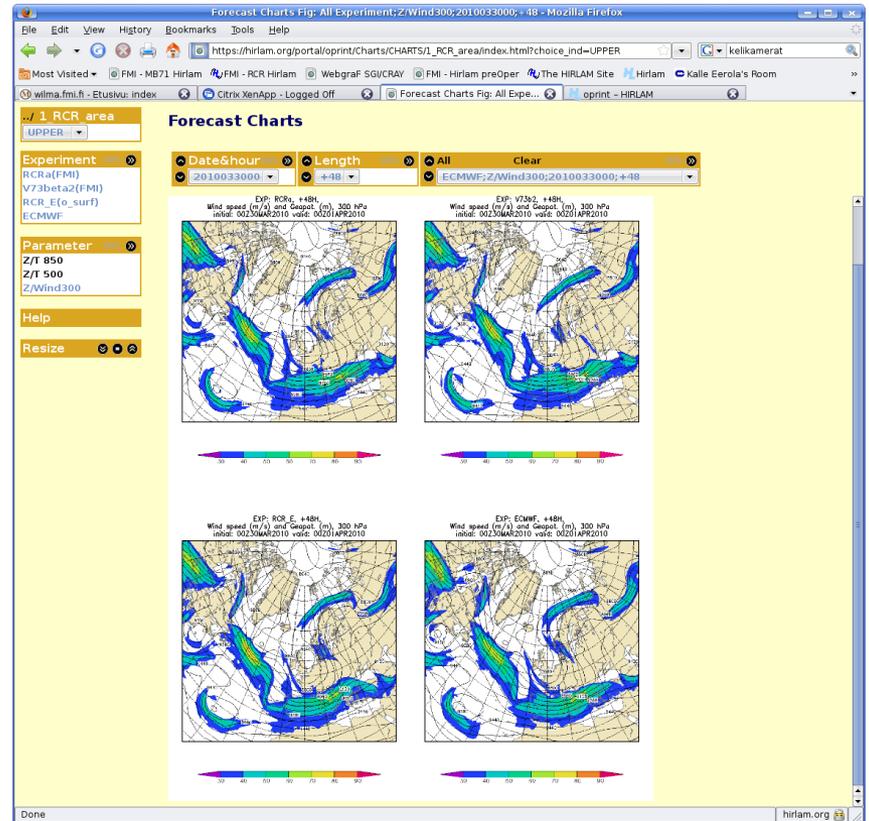

**Kalle Eerola**

**Finnish Meteorological Institute**

# Motivation and background

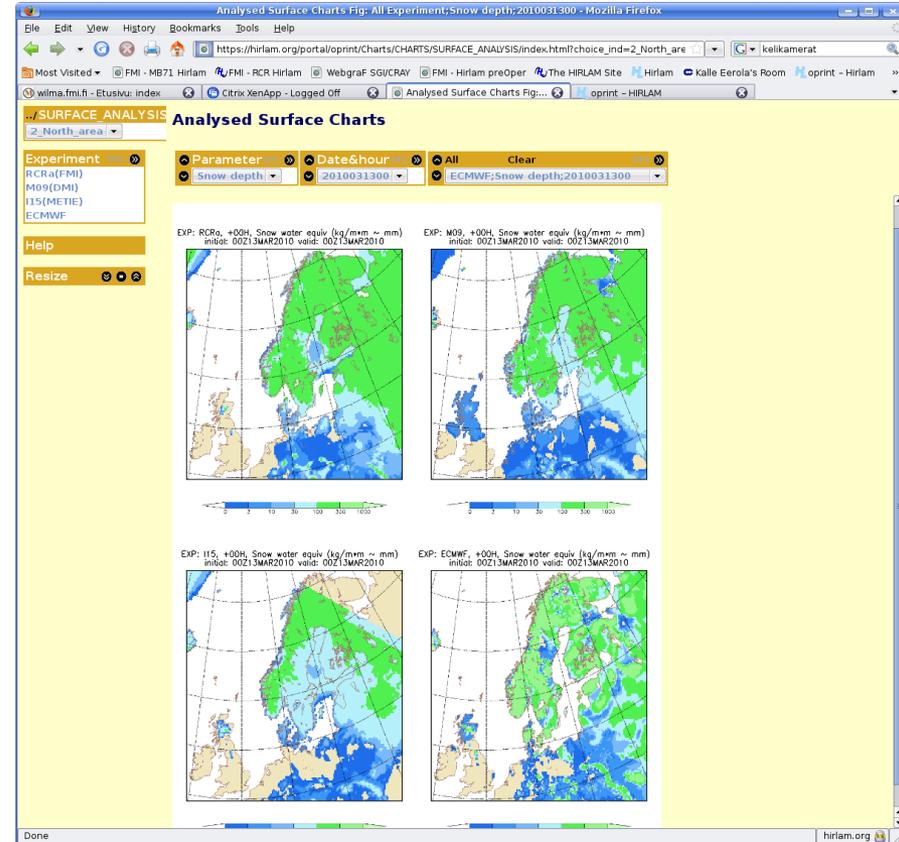

- **During Hirlam-A systematic work has been done to collect in real-time products from different operation Hirlam implementations to be shown on hirlam.org**
  - Observation Verification Inter-comparison
  - Monitoring and statistics of the data assimilation system
  - Diagnosis and statistics of daily operational runs
  - Mast data verification
  - ...
- **Latest development is the forecast charts**

# Basic ideas

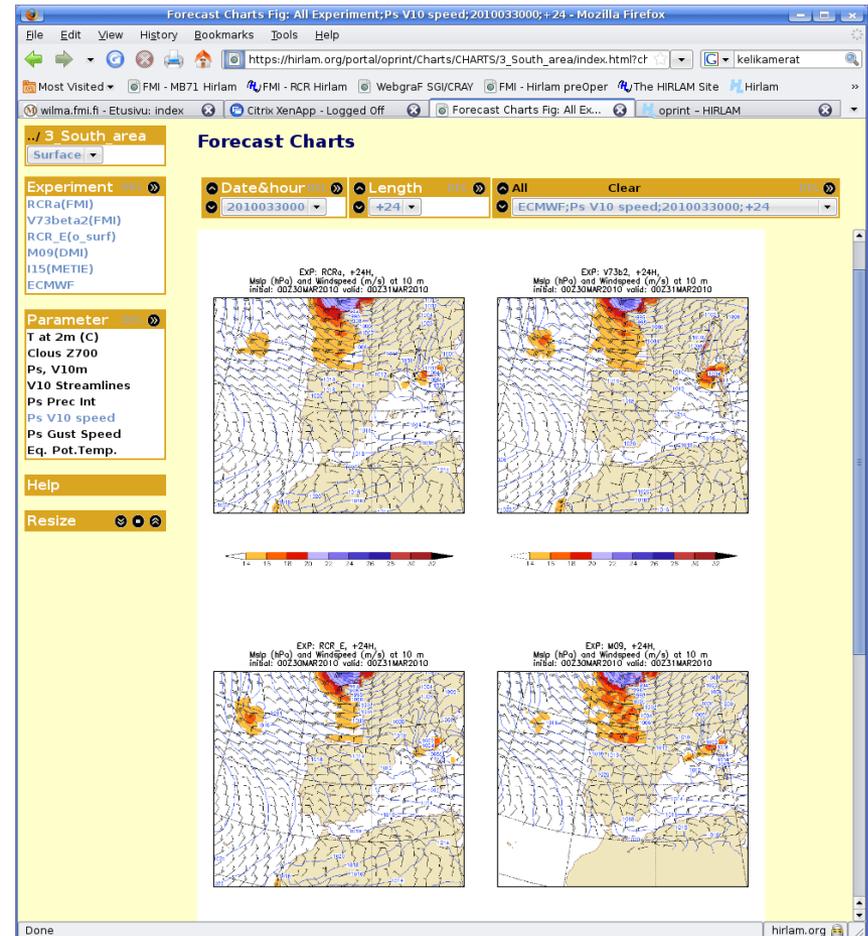

- **Different models: different areas**
- **Different graphics systems and different layout**
- **Not easy to compare**
- **For easy comparison**
  - Same projection
  - Uniform layout
  - Several sub-areas according to the needs
- **Near real-time**
- **Operational products**
  - Is useful also in experimentation
- **<https://hirlam.org/portal/oprint/Charts/CHARTS/>**

# Implementation now

- **Collect products at ECMWF**
  - Interpolation to same projection
  - Plotting using **Grads**
- **Transfer to hirlam.org**
- **FMI products produced at FMI**
- **Show using Webgraf**
- **But**
  - Fields are big
  - Plotted figures area small
- **How to proceed**
  - Centrally: one person responsible
  - Locally: smaller amount of data to be transferred
- **This tool will be put on hirlam/harmonie repository**
  - Useful on experimentation

# What do we have now?

- **Forecasts**
  - Large area
    - RCR-area
  - Five smaller areas
  - Upper-air fields every 6 hours
  - Surface fields every 3 hours
- **Surface analysis**
  - Same areas

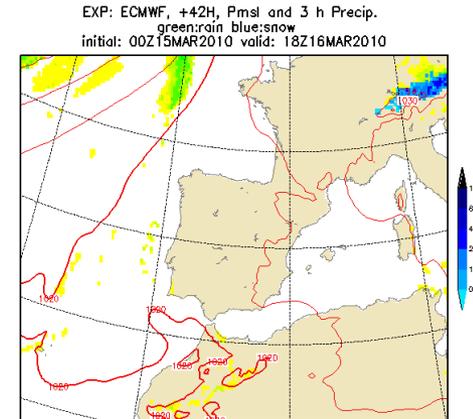

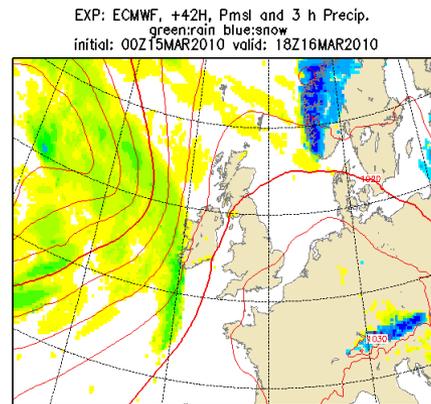

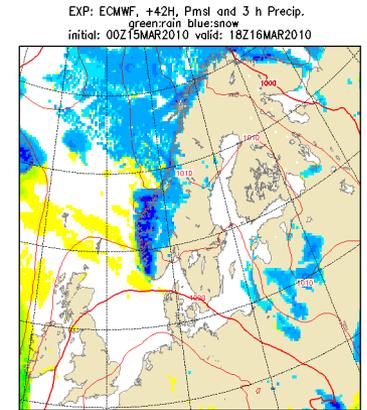

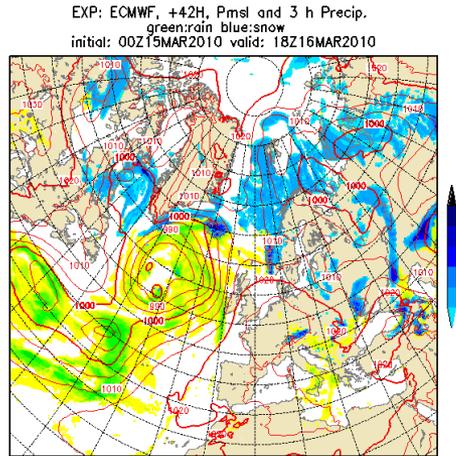

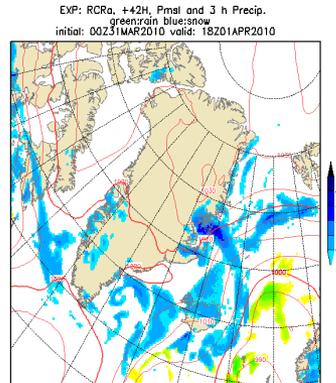

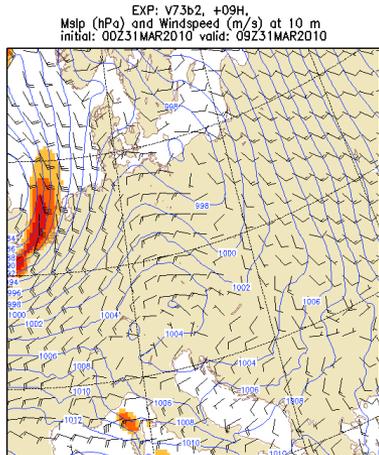

# Areas

## • At the moment

- Large RCR-area
- Five smaller area
  - Nordic (Scandinavia)
  - Southern (around Spain)
  - Western (around Ireland)
  - Greenland area
  - Central European area

## • New areas according to the need or wishes

## Parameters now: forecasts

- Upper-air fields
- Surface parameters
- Developing stage
  - Missing fields in some cases
  - Style to be fixed

## Parameters now: analysis

- Sea (lake) surface temperature and ice coverage
- Snow water equivalent

EXP: ECMWF, +00H, SST and Ice cov.  
initial: 00Z15MAR2010 valid: 00Z15MAR2010

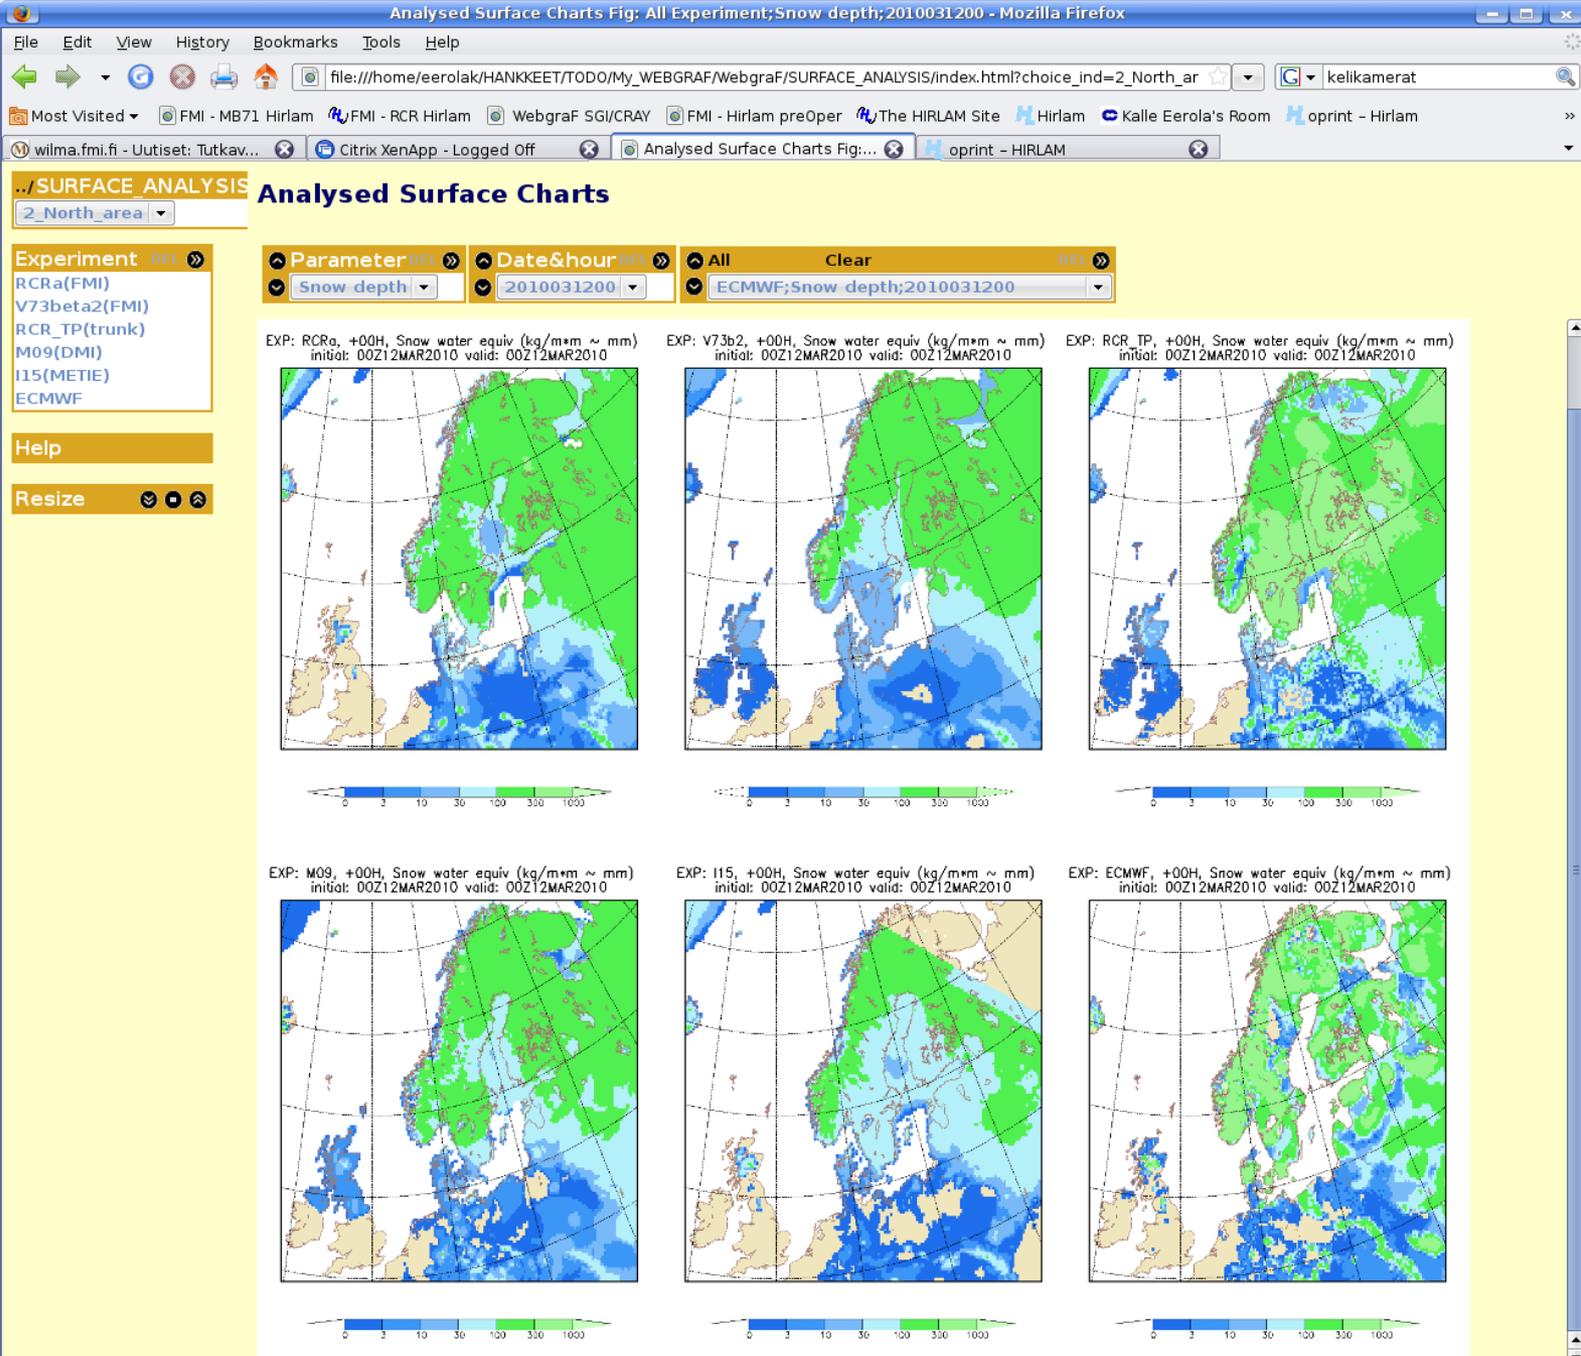

EXP: ECMWF, +00H, Snow water equiv (kg/m<sup>2</sup> ~ mm)  
initial: 00Z15MAR2010 valid: 00Z15MAR2010

# Examples of usage so far

- **Snow analysis**
- **Sea surface/lake temperature**

# Developments and conclusions

- **Cleaning and corrections**
- **New products**
  - Forecasts based on valid time
  - Analysis increment maps
  - Including Harmonie fields
- **Develop a general tool to be added to the hirlam.org repository**
- **WEB address:**  
<https://hirlam.org/portal/oprint/Charts/CHARTS/>
- **Comments and suggestions welcome**

# Conclusions
