LAMEPS discussion

Talks

- EPS systems: GLAMEPS, LAEF, EuroTEPS

- Hybrid ensemble data assimilation for EPS

- EPS application, e.g. in energy industry

- Verification

Discussion

- Verification: NECESSARY, very high resolution EPS, extrem weather, different regions

- Domain size & member size: should be investigated

- IC perturbation on top of EDA: still needed due to few members in EDA

- Predictability of extrem events: upscaling

- Application very important

Discussion

- More and more EPS work will be included in data assimilation and model physics

- Intermediate higher deterministic LAM run: opinion diverse
