Dear colleagues,

the new "mirage7" server is now in place. Before resuming work with the NWP repository, please make sure that you adapted your user environment following the two steps described in item 2 below.

Best regards,
Claude

Objet: Change of the MF GIT-GCO server: Tuesday 16 June

Bonjour all,

next Tuesday 16 June, the MF main GIT server hosting the NWP code repository (aka T-cycles) will be upgraded.

The present machine "mirage" will be replaced by a new server "mirage7".

On 16 June, processing this change will affect the GCO website, the GIT cycles history functions and the GIT repo source code management system as such.

Primarily, there are two messages for you:

1. please do not consider accessing or using the MF GIT repository on Tuesday 16/06. We will inform you once the whole process is completed and the MF GIT repo becomes accessible again.

2. users will have to do the following two changes in their local environment:

- in your "arpifs" repository, type: **git config --replace-all remote.origin.url git://mirage7/arpifs**

(NB: if the "git" is not in your \$PATH on "merou", then use: /home/marp001/git-install/default/libexec/git-core/git);

- in your ".bash_profile", if you are exporting the variable GIT_ROOTPACK, then you'll have to (on your choice):

- 1) either update it to: **git://mirage7** ;
- 2) or simply remove it, as it is defined in the GIT-GCO toolbox

These two actions can be done at any time, but not before Tuesday morning !

Please forward this information to other colleagues in your teams, who might be using the MF GIT access.

Best regards,
Claude Fischer
