National Research Institute

# **DATA ASSIMILATION activities at IMWM Kraków**

M. Szczęch-Gajewska, B. Bochenek

# Model characteristics

	<b>ALARO-1</b>
horizontal resolution	4.0km
number of grid points	789 x 789
vertical levels	60
operational time step	163.6s / 120s
coupling frequency	3h (ARPEGE LBC)
forecast length	66h (60h at 18UTC)
model version	CY40 T1
HPC	Cluster of HP BL460c_GEN8 servers connected with Infiniband network, OS Scientific Linux 6, Intel Xeon E5-2690 processors - with maximum 1552 cores (97 nodes with 16 cores each), each core RAM 128 GB, disc array - 64 TB.

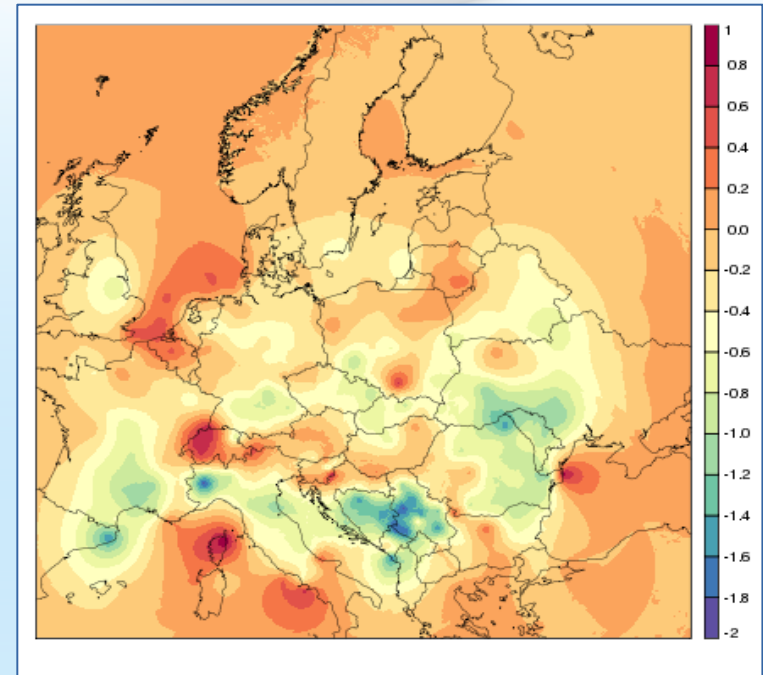

# AROME/IMWM DA

## Data

- for now just OPLACE base

## Surface

- Data assimilation using CANARI
- Standard setting, no special tuning
- Test once per day run at 00UTC
  - (background our 6h forecast from 18UTC, SST copied from ARPEGE analysis, CANARI and then 66h forecast)

# ALARO-1/IMWM DA - verification

## HARP verification

Plot Data

Spread & Skill(RMSE) : T2m  
Verification Period: 2018091000-2018091700  
Stations: ALL

# Plans: local data

- Add local data to our CANARI run  
(*obsoul\_merge* we have but not yet used)
- Start 4 times per day parallel run with CANARI
- 3D-Var ...

# Plans: 3D-Var preparation

- First for AROME B matrix was built on the base of our domain AROME ensemble forecast with LBC from AEARP. AROME domain: 799x799grid points, 2.0km horizontal resolution, 60 vertical levels. Ensemble: 6 members, 2 times per day and 30 days of forecast.
- Not finished yet the same work for ALARO-1.  
Details – ask Bogdan.
