

ARSO VREME

**Snowpack modeling using the Crocus snowpack
model at the Slovenian Environment Agency
(ARSO)**

Matjaž Ličar

- **Motivation**

- Avalanche risk assessment tools
- **CROSSRISK** project

- **Validation and model performance**

- Gridded runs on **4 km Aladin** and **1 km Inca** grid
- **Point** based runs

- **Operational implementation**

- Daily **24h analysis** runs + **72h forecast**

- **Future Work**

Public warnings – reducing rain and snowfall related risks

A project between many partner organizations from Slovenia and Austria

Goals:

- Improvement of forecast systems
- Unification of reports issued to the public
- ...

Snowpack modeling:

Provide objective tools to forecasters

Comparison of different snowpack models

- 2D distributed simulations: Crocus (ARSO)
- Point simulations: Snowpack (ZAMG)

2D runs – Aladin domain

ARSO VREME

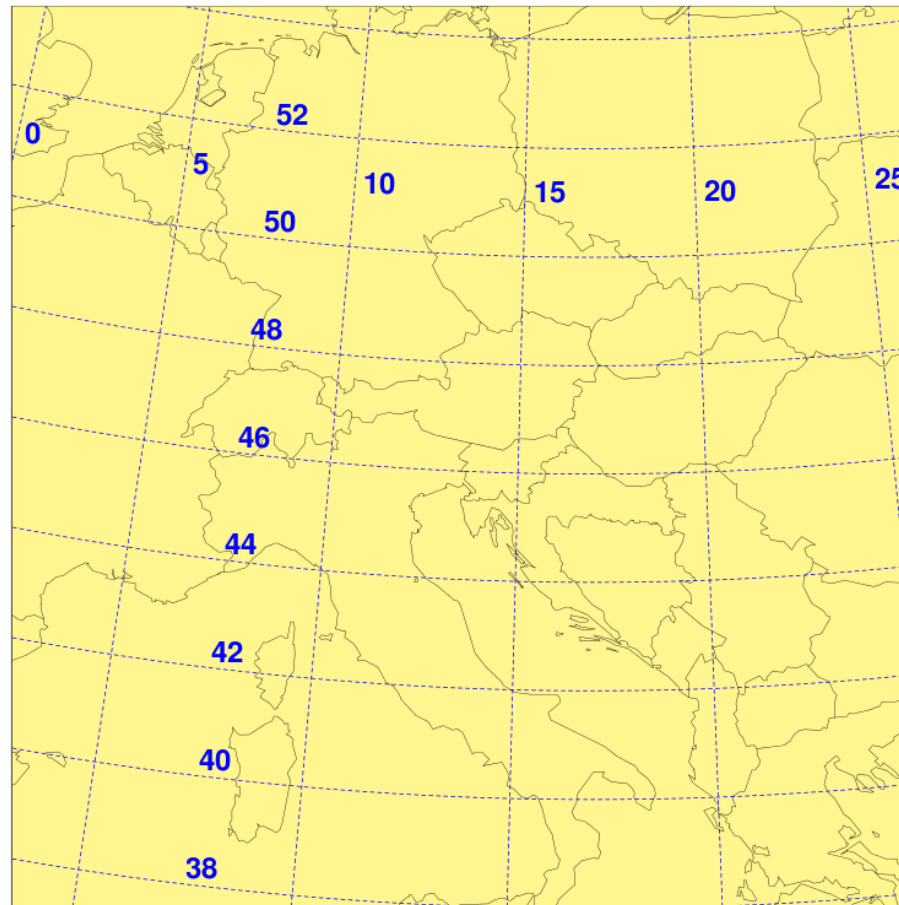

- Aladin-ALARO used operationally at ARSO
- 4 km domain
- Output used to construct seasonal forcing files for SURFEX

Aladin domain

ARSO VREME

4km Aladin-SI Domain (421 by 421 points)

Inca-SI analysis

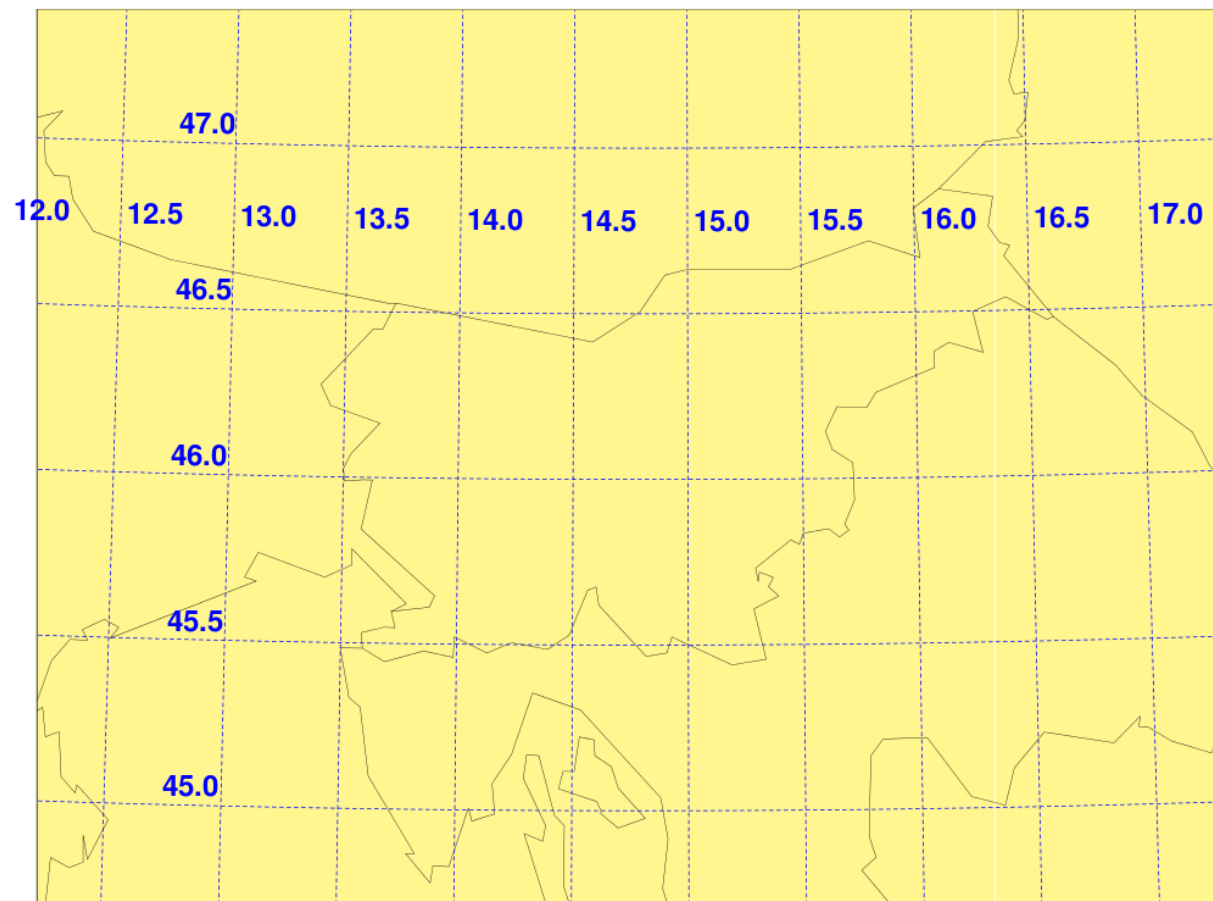

- **1km domain** centered at Slovenia
- Analyzed near surface quantities:
 - T2m
 - RH
 - Wind
 - Precipitation + precipitation type
- **SW** and **LW interpolated** from Aladin

Inca domain

ARSO VREME

1km INCA-SI Domain (401 by 301 ponts)

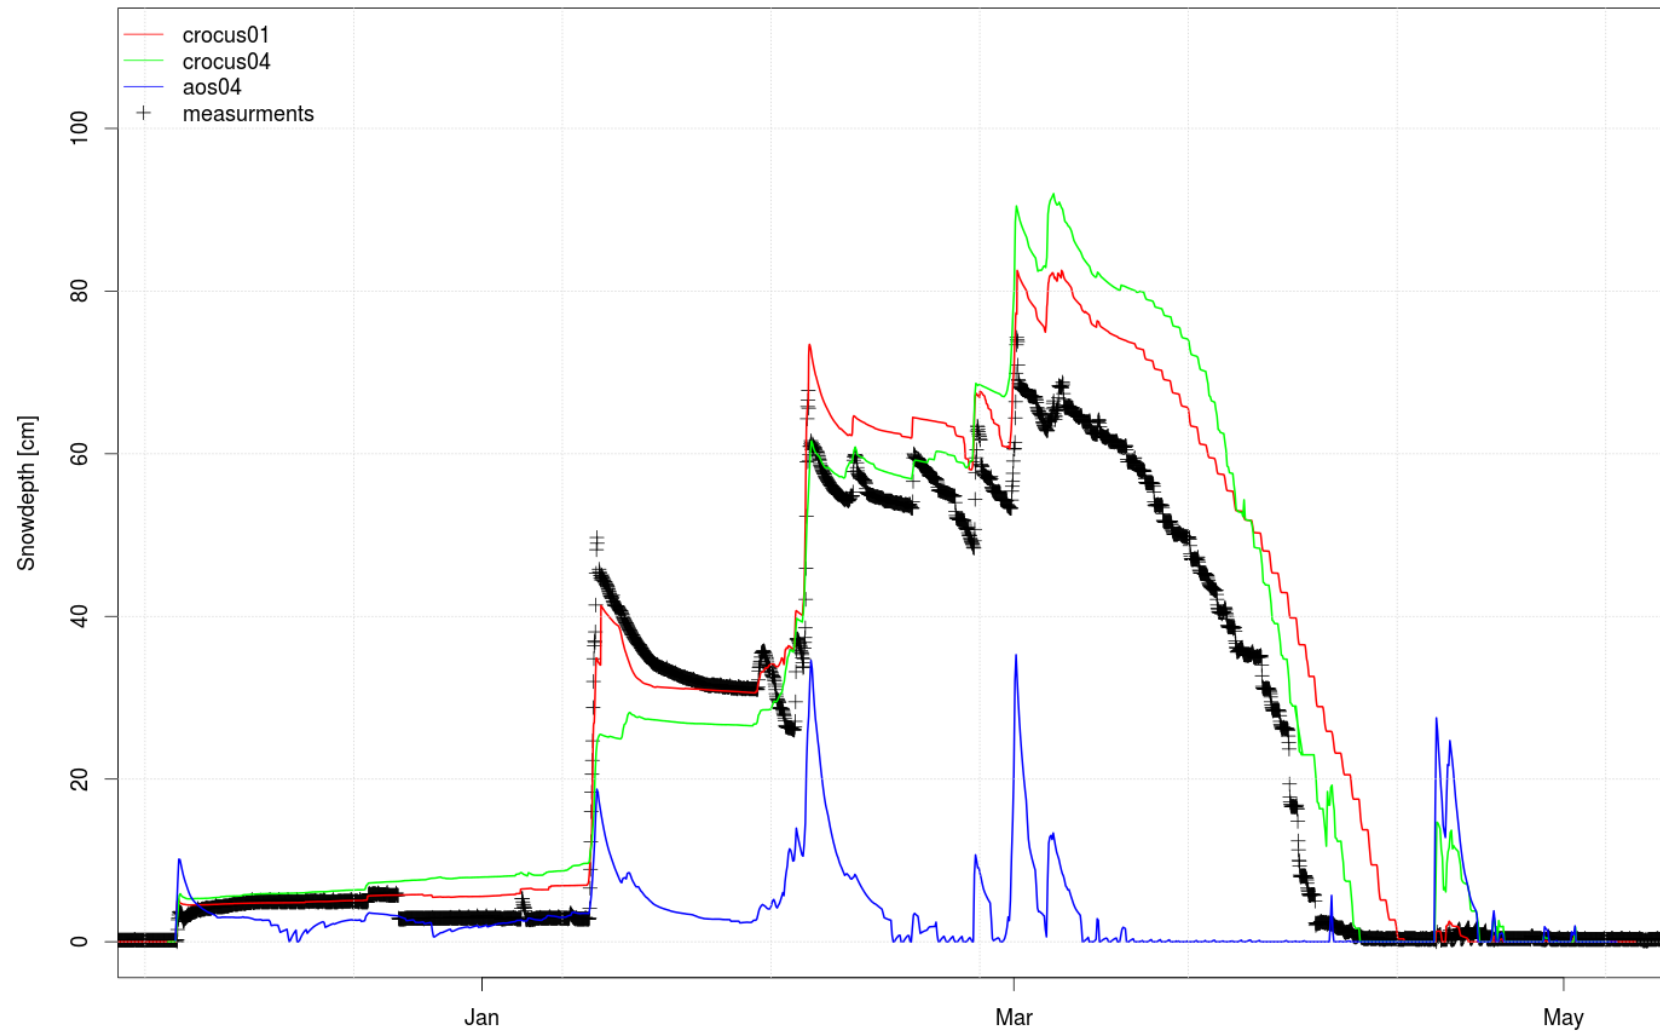

- Comparison of **snowdepth** between **SURFEX** runs on **4 km (crocus04)**, **1 km (crocus01)** domain and **Aladin model (aos)**
- Automatic **snowdepth** measurements available for **66 stations**

Analysis

- **Daily 24h** runs based on **Inca_SI analysis**
- **LW** is obtained from **Aladin** (bias corrected)
- A **restart file** is generated at the end of each day, which is used as the **initial state** for the next simulation

Forecast

- **72h** forecast based on **Aladin 00 run** forecast
 - Aladin data is **interpolated** onto Inca domain
- Restart file** from **analysis** is used as the **initial state**

Future work

ARSO VREME

- Operational suite on Inca-AT domain
- Usage of Crocus for hydrological modeling purposes
- Optimization of the operational suite

End

ARSO VREME

Thank you for the attention!
